

Jamie Butler

Technology Leader · Systems Architect

Houston, TX | jamieadambutler@icloud.com | (951) 768-4008 | [linkedin.com/in/jamieadambutler](https://www.linkedin.com/in/jamieadambutler)

Value Proposition

Companies bring me in when managing technology stopped being enough. The systems are fragmented, the processes run on manual effort, and leadership can't see the business clearly. I fix all three at once, building the architecture, the governance, and the automation that let an organization grow without growing its complexity.

I work where executive strategy and technical architecture meet. In one conversation I can translate a business problem into a technology plan; in the next I am in the build making sure it ships right. What I leave behind isn't a modernized stack. It's an operation that runs differently.

Where I Create Value

Enterprise Platform Migrations: CRM, ATS, HRIS, ERP, and CLM moves scoped and delivered without disrupting the business. Salesforce, Bullhorn, ADP Workforce Now, Ironclad, MS Dynamics, Sage Intacct.

M&A Integration: Four post-acquisition integrations unified in one to three months each, platforms, data, and workflows brought onto one operational platform.

Cloud & Identity: Microsoft 365, Azure, and Entra identity governance with SSO/MFA built to scale, including a 150 to 500 user re-architecture absorbed on the existing team.

AI & Automation: GPT agents, Power Automate pipelines, and AI IVR embedded where they remove real work, not where they make a slide.

Security & Governance: MSSP and endpoint programs with the acceptable-use, incident-response, and access-control frameworks behind them. Policies without enforcement are just documents. I build both.

Executive Reporting: Power BI, Tableau, and integrated data pipelines that put answers in front of leadership while the decision still matters.

I am pursuing technology leadership and senior individual contributor roles, remote-first. Some mandates call for building something new; others call for running an environment that has to perform every single day. I am strong at both, and the standard never changes: an operation that performs today and is ready for the next decade.
