COVER LETTER

For more than twenty years I've built and run the technology behind growing companies. The industries have moved across legal services, healthcare staffing, financial services, manufacturing, and retail, but the work holds steady. Build IT that runs efficiently, connect the systems people actually work in, and give leadership a clear view of what's driving the business. Architecture, not administration.

Most recently I led enterprise technology at Latitude Legal through rapid growth and four post-acquisition integrations. I stood up a Microsoft 365 environment for a 150 to 500 user organization, moved the company from Bullhorn to Salesforce with an Experience Cloud portal and AI agents, automated the contract lifecycle in Ironclad, and built a security program and an ITSM practice from the ground up. None of it ran as an isolated IT project. Each one changed how the business performed.

The same pattern runs back through my career. At AlliedUP I consolidated recruiting and CRM onto one Bullhorn platform, implemented ADP Workforce Now, and built the board and grant reporting that gave leadership real visibility for the first time. At EOSG I sustained an enterprise stack through eight years of growth, including two ERP migrations and a pipeline connecting recruiting, payroll, and finance into one continuous flow.

I work at both ends of the problem. In a leadership conversation I can turn a business goal into a technology strategy and roadmap, then go hands-on in the architecture to make sure it gets built right. That combination is what lets an organization grow without growing its complexity.

I'm open to technology leadership and senior individual contributor roles, remote-first, where the work is real transformation rather than maintenance. If that's the kind of change you're working through, I'd be glad to talk about where I can help.

Thank you,

Jamie Butler
