VALUE PROPOSITION

Organizations bring me in to build technology that runs the way the business needs it to, then keep it running as the business grows. I work where strategy and architecture meet, so I can translate a goal into a plan and then build the plan. It's a rare combination in technology leadership, and it's what turns a vision into systems that actually deliver.

What I leave behind is an operational foundation. The architecture, governance, and automation in place so the organization can grow without growing its complexity.

CORE CAPABILITIES

Enterprise Platform Migrations — CRM, ATS, HRIS, ERP, and CLM, scoped and delivered without disrupting the business.

Cloud & Identity — Microsoft 365, Azure, and Entra identity governance built to scale.

Systems Integration — APIs and data pipelines connecting ATS to payroll to ERP into one environment.

AI & Automation — GPT agents, Power Automate pipelines, and AI IVR embedded across operations.

IT Service Management — ITIL-based request, incident, and change practice on Jira Service Management and ServiceNow.

Security & Governance — MSSP programs, endpoint protection, and policy frameworks built from the ground up.

Executive Reporting — Power BI, Tableau, and integrated pipelines so leadership sees the business clearly.

I'm pursuing technology leadership and senior individual contributor roles, remote-first, where the work is real transformation rather than maintenance. I do my best work in organizations ready to run differently, where leadership is ready to build the foundation that defines the next decade.
