EXECUTIVE BIOGRAPHY

Jamie Butler is a technology executive and digital transformation leader with more than twenty years of experience building the infrastructure that lets organizations run the way leadership always intended. His career has been defined by a rare combination: the ability to operate at both the executive strategy level and deep in the technical architecture — translating vision into systems that deliver measurable outcomes without losing anything in translation.

Across legal services, healthcare staffing, financial services, manufacturing, retail, and education, Jamie has consistently taken fragmented, complex technology environments and rebuilt them as unified enterprise ecosystems. His work spans CRM, ATS, HRIS, ERP, contract lifecycle, cloud infrastructure, cybersecurity, AI-driven automation, and analytics — not as isolated platforms, but as interconnected systems designed to move data and workflows seamlessly across every department.

CURRENT FOCUS

Most recently, as Senior Director of Technology at Latitude Legal, Jamie led the company's full enterprise technology strategy through a period of rapid growth and four post-acquisition integrations. Key programs included the migration from hosted Exchange to Microsoft 365 across a 150–500 user environment; a complete CRM and ATS transformation from Bullhorn to Salesforce with Asynbl integration and AI-powered GPT agents; Ironclad contract lifecycle automation replacing manual signature processes; Zoom Phone AI IVR deployment; a dedicated MSSP rollout establishing formal cybersecurity governance; a Power Automate onboarding system that eliminated a critical operational bottleneck during rapid hiring scale-up; and a SharePoint intranet replacing Dropbox across all departments. Each initiative was architected not as an IT project, but as an operational transformation that changed how the business performed.

EARLIER LEADERSHIP

At AlliedUP Cooperative — the nation's first worker-owned healthcare staffing cooperative — Jamie directed a full-stack technology transformation as Vice President of Technology. He consolidated BlueSky ATS and Salesforce CRM into a unified Bullhorn platform, implemented ADP Workforce Now for HRIS and payroll, integrated AccuSource background screening with automated pass-through to PEO onboarding, and built executive and board-level KPI reporting pipelines for leadership and external grant stakeholders. He owned a \$1M+ technology budget end to end across planning, forecasting, and vendor management.

At EOSG Resources, as Director of IT Services, Jamie sustained and modernized a complete enterprise technology ecosystem through eight years of substantial organizational growth. He led two major ERP migrations — Oracle E-Business to Microsoft Dynamics, and NetSuite to Sage Intacct — replaced the ATS platform from Avionté to Bullhorn, migrated HRIS and payroll to PrismHR, and designed an end-to-end integration pipeline connecting ATS, payroll, and ERP into a single continuous data flow supporting ~900 active clients.

Earlier in his career, Jamie built the cross-functional technology and reporting infrastructure at Cannon Fabrication and Casablanca Fan Company, led ERP implementations at Oreq Corporation, and contributed to a \$1M inventory management system implementation at Anchor Blue Retail Group. His

foundation in network administration, database development, and operational systems — established at ITT Technical Institute — underpins a career that has moved consistently from technical execution to enterprise strategy.

LEADERSHIP APPROACH

Jamie’s leadership approach centers on building systems and teams that execute at scale. He has led distributed organizations spanning internal engineers, onshore operational staff, nearshore and offshore development teams, and consulting partners — establishing the clarity, structure, and accountability that keeps complex initiatives moving from strategy through delivery. His core principle: foundation is the transformation. Structural and governance work is the real strategic work, not a prerequisite to it.

EDUCATION & CREDENTIALS

Jamie holds an MBA in Business Information Systems, a Bachelor of Science in Computer Science with a focus on Information Systems Security, and an Associate of Science in Computer Science with a focus on Computer Network Systems. He is a certified Project Management Professional (PMP) and holds additional credentials in Artificial Intelligence and Responsible AI from Google, Agile with Jira, Cybersecurity, GDPR Data Privacy & Protection, PCI DSS Compliance, Strategic Leadership, Leading Change Management, Technical Project Management, and Microsoft Active Directory Administration.
